ETHYLENE GLYCOL

ETHYLENE GLYCOL is colorless, practically odorless, low-volatility, low-viscosity, hygroscopic liquid. It is completely miscible with water and many organic liquids.

Applications

The widespread use of ethylene glycol as an antifreeze is based on its ability to lower the freezing point when mixed with water. The physical properties of ethylene glycol-water mixtures are therefore extremely important. Ethylene glycol has numerous end uses that include the production of polyester fibers and resins, as an additive in chilled water air-conditioning systems, geothermal heating/cooling systems, and as an important precursor to polyester fibers and resins in the plastics industry.

PRODUCT SPECIFICATION

ETHYLENE GLYCOL	98-100 %
DIETHYLENE GLYCOL	0-2 %
